Feeding Directions

This feed is to be provided for goats. Feed at the rate of 1 to 2% of body weight per head per day along with free choice hay or other forages

CAUTION

Do not feed to sheep due to copper levels in this feed.

Always provide a source of fresh clean water, and free choice minerals. When making changes in an animals diet, allow a 7 to 10 day transition period. Provide ample feeder space for livestock. Do not feed wet, moldy, or insect infested feed

This feed was designed to be fed to any class of goat and is primarily aimed at the meat goat herds. It will develop buck and does and can be fed to dairy animals since it is not medicated. High producing dairy does may need a bit more energy than this feed offers.
