

From FDAC – Dr. Fernandez – December 2017

For the show organizers

Always follow chapter 5C-4 for the admission of animals for exhibition and notify the FADCS/DAI

Preparation for the show:

- Swine Tagging: disinfect the tagging gun after each use or trailer, use disposable gloves, do not go inside the trailer, let the exhibitor bring the animal to you. If you are going inside of each trailer, it is recommended the use of disposable booties and disposable apron for each trailer.
- At the weight in: sweep the floor and disinfect the area were animals are entering the pen, ideally after each animal. Before the animal is unloaded from the trailer ask the exhibitor for the temperature taken that morning.
- During the show ask the exhibitor to take the temperature daily, if the animal is found abnormal needs it must be taken to isolation/quarantine area.
- Before the show start, have an isolation/quarantine area ready, if during the show any animal develops any clinical signs of an infectious disease, that animal needs to be move to isolation/quarantine area and then transported to origin for follow up.
