Division Dairy Goat

Class DAG-01 Senior Does under 2

There is a single entry in this class

Entry 661 is well deserving of a 1st place in her class, she has a mammary system which shows

- a. a strong medial support ligament that clearly defines the udder halves

- b. the udder halves are evenly balanced with teats of uniform size and medium length and diameter in proportion to the capacity of the udder pointing straight down.

Class DAG-02 Senior Does over 2 and under 3 yrs

I have placed this class of _____ 2 year old milkers__

ONE (547) is placing over TWO(552) because of:

- a. an advantage in Dairy strength, with her neck blending smoothly into the shoulders and a clean cut throat and brisket with adequate width of chest floor.

- b. In Mammary she shows a more strongly attached udder with teats pointing straight down.

TWO(552) is placing over THREE (458) because of an advantage in general appearance:

- a. Her back is strong and straight with level chine, a straight wide loin, wide hips that are smoothly set and level with the back

- b. She also has the advantage in body capacity with depth and spring of rib tending to increase into a deep yet refined flank

THREE (458) is placing over FOUR(459) because of an advantage in mammary

- a. The mammary system is strongly attached with lateral attachments that hold the udder snug to the body.

- b. In general appearance Her front legs are straight and squarely placed under her shoulder and her rear legs are well angulated through the stifle to cleanly molded hocks.

FOUR, while standing in last place today, must be commended for her strong rear legs that are well angulated and show width between the hocks.

Class DAG-03

I have placed this class of ____ 3-5 year old milkers__

ONE(463) is placing over TWO(548) because of an advantage in mammary:

- a. She shows a well-balanced, capacious mammary with a high wide rear udder that is uniformly deep to the udder floor.

b. In General appearance she shows legs that are set straight and wide apart and squarely placed with rear legs that are well angulated.

TWO(548) is placing over THREE(668) because of an advantage in General Appearance:

a. This doe shows smoothness of blending, upstandingness and particularly well angulated rear legs in side profile.

THREE(668) is placing over FOUR(551) because of an advantage in Mammary system:

a. She shows a more capacious well balanced udder with strong smooth lateral attachments that hold the mammary snug up to the body.

FOUR(551) is placing over FIVE (550)because:

a. Of her advantage in General Appearance particularly in feet and legs. Her front legs have clean knees and are straight, wide apart, and squarely placed.

FIVE(550), while standing in last place today, must be commended for her strength in mammary system particularly with regard to her strong medial suspensory ligament clearly defining the halves of the udder.

Grand Champion Senior Doe 463 This doe will be our Grand Champion senior today for the advantages that she possesses in both mammary and General Appearance. She has a capacious mammary that is strongly attached and well balanced with a high wide rear udder in general Appearance she had femininity, strength, upstandingness, length and smoothness of blending.

Reserve Grand Senior Doe will be Doe 661. Although she is just a yearling she is really showing an advantage over her competition today in the strength of medial suspensory ligament and correctness of those teats in placement on the udder floor and size and shape.

Class DAG-05

Entry 464 is well deserving of a first place in her class of junior kids under 6 months. This young doe has well angulated rear legs and strength and upstandingness in side profile.

Class DAG-07 Juniors 8-12 months

I have placed this class of 8-12 month old junior does

ONE(433) is placing over TWO(662) for her advantage in General Appearance and body capacity:

a. In General Appearance she has a strong straight back with well defined and wide pin bones.

b. In body capacity this is a relatively large doe with increasing depth from chest through the barrel and into the flanks.

TWO(662), while standing in second place today, must be commended for her _dairy strength in particular her long, lean neck, and freedom from coarseness.

Class DAG-08 12-18month junior does

I have placed this class of 12-18 month old junior yearlings

ONE(461) is placing over TWO(677) because of an advantage in general appearance:

a. Her front legs are placed more correctly under her shoulder showing more depth and width into the chest floor and stronger brisket.

b. She also shows an advantage in Dairy Strength being more uphill, angular, and open. She is refined but shows substance with a long lean neck smoothly blended into her shoulders and rear legs that show a correct incurving of the thigh.

TWO(677) is placing over THREE(667)because of an advantage in General Appearance and Dairy Strength.

a. In particular she shows a strong rump which is uniformly wide an nearly level from thurl to thurl.

b. In Dairy Strength she shows strength but is free from coarseness and has a strong yet refined bone structure.

THREE(667) is placing over FOUR(396) because of an advantage in General Appearance and Dairy Strength

a. She is upstanding, long, and smoothly blended particularly in the back and rump. She shows a wider rump from thurl to thurl and longer from hips to pins. She is well angulated in the rear leg and has adequate width between the hocks. b. in Dairy Strength she is more angular and open with a long, lean neck.

FOUR(396) is placing over FIVE(462)because of an advantage in General Appearance:

a. _She is more level over the topline, showing a stronger, straighter back through the chine and loin.

FIVE(462), while standing in last place today, must be commended for her correctly angulated rear legs and width between the hocks.

Class DAG-09 18-24 month junior does

Entry 403 is a single entry and well deserving of a first in class. She has well angulated rear legs with tremendous width between the hocks.

Grand Champion Junior Doe 461 This doe is so well balanced with an advantage in dairy strength and general appearance. In particular upstandingness, length, and smoothness of

blending. Her deep wide chest with a strong brisket and correct moderate incurving of the thigh in side profile.

Reserve Grand Champion Junior Doe 433 This doe has such tremendous length of body especially in her back and rump while still retaining that levelness form thurl to thurl and across the shine and loin. Her depth in the barrel also shows such length, width, and depth into the flank.

Although the junior does were extremely nice I will be staying with our milkers today for Grand Champion and Reserve Grand Champion Dairy Goat for the advantages that they show in mammary and function of a dairy animal.

Grand Champion Dairy Goat 463
Reserve Grand Champion Dairy Goat 661

Overall, I feel most competitors did a great job setting up their goats for pictures. I was particularly impressed with the setting of front and rear legs under the goat in a lot of the side profile pictures. Most goats needed a longer fill time to show the udder at capacity and make the udder more symmetrical because it wasn't nursed unevenly.

I appreciate the time and effort that the competitors put into their entries and could tell that all the goats are well cared for and have healthy conditioning scores. I look forward to seeing the goats in person one day at a show.

Thank you
Deedra Earl
