

# Leafy Spurge

Their roots can grow up to 30 feet long!

There is different control method to help stop leafy spurge in its track. Help the Aphthonia Beetle (a biological control insect) destroy this noxious weed by finding the way through the root to the leafy spurge growing below.

DID YOU KNOW???

Amazing Adaptation:

Leafy spurge can grow where other plants struggle. Places with dry, poor soil because it absorbs all the water with its extensive root system. It is very difficult to pull leafy spurge out other the ground because it can stretch its roots very far into the soil.

Other Facts:

Leafy spurge excretes a substance that can give you bulging blisters! It is toxic to humans, cattle and horses.
