

Bubble Art-

<https://earlylearningideas.com/art-activities-for-kids-bubble-painting/>

1. Poke a small hole with a pushpin in each straw that the students use so that they can't easily suck up the paint solution
2. To make the paint solution, add paint to the bottom of a plastic container or cup, add a squirt of dish soap and fill the container with a couple inches of water
3. The solution should be thin enough so that when the students blow bubbles into the liquid, the bubbles expand over the top of the container
4. Students can press a small piece of paper over the bubbles to leave a print, and then repeat the process with a different color, but use the same paper to mix colors
